

CareNavigator AI — Autonomous Clinical Triage & Care Coordination Agent

Purpose

Continuously triage patients, prioritize risk, and coordinate care across channels (portal, phone, EHR) without needing a human in every loop—while keeping clinicians in control of final decisions.

Core capabilities

1. Autonomous symptom triage using conversational intake (chat/voice).
2. Guideline-driven risk assessment: Emergency, Urgent, Routine, Self-care.
3. Care routing & scheduling: appointments, escalation to clinicians, EHR summaries.
4. Continuous follow-up: monitoring vitals, escalation, reminders.
5. Documentation automation: triage notes, patient instructions, audit logs.

Example workflow

Patient interacts via portal or call → symptom collection → risk scoring → emergency alerts OR scheduling → EHR update → follow-up monitoring → escalation if needed.

Business and clinical impact

- Reduces nurse triage and call center load
- Faster care for high-risk patients
- Improved documentation quality
- Higher patient satisfaction with 24/7 access
